### **Feline Spay or Neuter ( 4-6 Months of Age)**

Your pet will need to be fully vaccinated prior to surgery. Pain medication and Calmer collars are included in the price of the surgery. With using a calmer collar it will help deter licking while healing. While your pet is here for surgery it's a good time to get them microchipped while they are sedated, to have nails trimmed, ears cleaned and even start a baseline for bloodwork to check liver and kidney functions to make sure your pet is safe to go under anesthesia. However the bloodwork is not required until they reach the age of 5 years. Please let the staff know when scheduling these services if you would like to add any of them on. We take a surgery deposit of \$75.00 at the time of scheduling surgery. The deposit comes off your total the day of surgery. If you need an estimate for spay/neuter please call or email us, thank you!
